

4. Network Protocol Attacks Lab

Objective

To analyze common network protocol weaknesses by simulating Man-in-the-Middle (MitM) attacks and credential interception in a controlled lab environment (TryHackMe VM).

Tools Used

- **Responder** – Credential harvesting & SMB relay
 - **Ettercap** – ARP spoofing / MitM
 - **Wireshark** – Network traffic analysis
-

Attack Log

Attack ID	Technique	Target IP	Status	Outcome
015	SMB Relay	192.168.132.129	Success	NTLM Hash

Attack Summary (50 words)

Ettercap was used to establish a man-in-the-middle position through ARP spoofing. Network traffic was intercepted and analyzed using Wireshark. Responder exploited insecure SMB authentication, successfully capturing NTLM credentials, highlighting the risks of legacy protocols and insufficient network-level protections.
